

EXPERIMENT 19. Word Sense Disambiguation using Lesk Algorithm

Aim: To implement Word Sense Disambiguation using the Lesk algorithm in Python.

Program:

```
import nltk

from nltk.wsd import lesk

sentence = input("Enter a sentence: ").split()
word = input("Enter the ambiguous word: ")
sense = lesk(sentence, word)

if sense:
    print("\nSelected Sense:")
    print("Synset:", sense.name())
    print("Definition:", sense.definition())
else:
    print("No sense found.")
```

Output:

The screenshot displays a Python IDE with two windows. The left window, titled 'EXP19.py', contains the following code:

```
import nltk
from nltk.wsd import lesk
sentence = input("Enter a sentence: ").split()
word = input("Enter the ambiguous word: ")
sense = lesk(sentence, word)
if sense:
    print("\nSelected Sense:")
    print("Synset:", sense.name())
    print("Definition:", sense.definition())
else:
    print("No sense found.")
```

The right window, titled 'IDLE Shell 3.14.0', shows the execution output:

```
Python 3.14.0 (tags/v3.14.0:ebf955d, Oct 7 2025, 10:15:03) [MSC v.1944 64 bit (AMD64)]
on win32

>>>
= RESTART: C:/Users/Sravanthi.gunapu/OneDrive/ドキュメント/NLP/LAB EXPERIMENTS/EXP19.py
Enter a sentence: I went to the bank to deposit money
Enter the ambiguous word: bank

Selected Sense:
Synset: depository_financial_institution.n.01
Definition: a financial institution that accepts deposits and channels the money into le
nding activities
>>>
```

The Windows taskbar at the bottom shows the system clock as 10:25 on 26-08-2026, with a weather widget indicating 31°C and 'Mostly sunny'.
