

EXPERIMENT 2: Finite State Automaton (Strings Ending with 'ab')

Aim: To implement a basic finite state automaton that recognizes strings ending with 'ab'.

Program:

```
s = input("Enter a string: ")
if s.endswith("ab"):
    print("Accepted")
else:
    print("Rejected")
```

Output:

The screenshot displays a Python IDE with two windows. The left window, titled 'EXP2.py', contains the following code:

```
s = input("Enter a string: ")
if s.endswith("ab"):
    print("Accepted")
else:
    print("Rejected")
```

The right window, titled 'IDLE Shell 3.14.0', shows the execution output:

```
Python 3.14.0 (tags/v3.14.0:ebf955d, Oct 7 2025, 10:15:03) [MSC v.1944 64 bit (AMD64)]
on win32
Enter "help" below or click "Help" above for more information.
>>>
= RESTART: C:/Users/Stravanthi.gunapu/OneDrive/ドキュメント/NLP/LAB EXPERIMENTS/EXP2.py
Enter a string: ABAB
Rejected
>>>
```

The taskbar at the bottom shows the system clock as 20:09 on 05-08-2026, with a battery level of 30% and a temperature of 31°C.
