

EXPERIMENT 4: Finite State Machine for Plural Generation

Aim: To implement a finite-state machine for generating plural forms of English nouns.

Program:

```
word = input("Enter a noun: ")
if word.endswith("y"):
    print("Plural:", word[:-1] + "ies")
else:
    print("Plural:", word + "s")
```

Output:

The screenshot displays a Python IDE with two windows. The left window, titled 'EXP4.py', contains the following code:

```
word = input("Enter a noun: ")
if word.endswith("y"):
    print("Plural:", word[:-1] + "ies")
else:
    print("Plural:", word + "s")
```

The right window, titled 'IDLE Shell 3.14.0', shows the program's execution. It prompts the user to enter a noun, and the user has entered 'City'. The program outputs 'Plural: Cities'.

```
Python 3.14.0 (tags/v3.14.0:ebf955d, Oct 7 2025, 10:15:03) [MSC v.1944 64 bit (AMD64)]
on win32
Enter "help" below or click "Help" above for more information.
>>> = RESTART: C:/Users/Stravanthi.gunapu/OneDrive/ドキュメント/NLP/LAB EXPERIMENTS/EXP4.py
Enter a noun: City
Plural: Cities
>>>
```

The Windows taskbar at the bottom shows the system date as 05-08-2026 and time as 20:23.
